

Active Learning & Collaborative Learning,
only with Web Browser !

<http://schooltakt.com>

To create an environment where teachers can teach with ease and students can learn with joy.

What is schoolTakt?

schoolTakt is a LMS (Learning management system) that can be used on iPads, tablets, PCs, and any other smart devices. By using preexisting templates and teaching materials as well as uploading original materials as pdf or image files, teachers can view student's learning patterns in real time, and students can share their answers among themselves to easily create a "collaborative learning" space. Teachers can still continue their own teaching style while incorporating ICT and tablets in their classrooms assisted by visual support or practice sessions. Since you only need a web browser to use this platform, there is no need for installations, particular devices. You only need your own smart device that has a web browser, whether it's a Mac, PC, Tablet, or a smartphone. It doesn't require students to have the same type of device or OS to use it in classrooms.

Free Trial

One year **Free Trial**, Limited to **10 teachers!**

Features

Reading and editing PDF/Image files

Take a picture of your teaching materials on paper and incorporate them into this platform. You can size up or down, rotate, and edit your pictures once you have taken them on your smart devices.

Learning/Teaching Templates

We have already over 3,000 existing templates that you can choose from. You can also forward your favorite drills and printed templates to other teachers. Since this platform records and shares logs of learning patterns, it's easy to pinpoint and analyze places where students are struggling.

Real time view of all answers

By literally viewing all students' answers as they are being written, teachers can give direct advice and correct their answers. Because students know that their teachers are observing how and what they answer on their page, students will naturally be inclined to put their best efforts.

Clicker

Students can either click "I Understand" or "I'm not sure" button. This enables teachers to easily discover each student's learning patterns as well as the entire class. Teachers can also identify at which point in class or lecture students found difficult to comprehend.

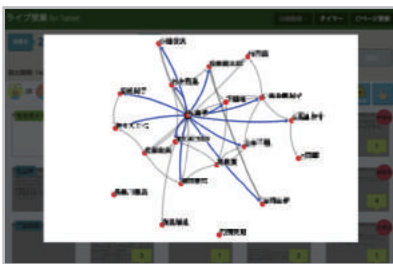

Collaborative Learning Feature

You can use the feature to allow students to not only view their own input and answers, but also view other students' answers and even edit them. By having students write their opinions and answers on just one note, students can form groups to start joint research projects or put together and present summaries of opinions.

Comment and "Like"

We have already over 3,000 existing templates that you can choose from. You can also forward your favorite drills and printed templates to other teachers. Since this platform records and shares logs of learning patterns, it's easy to pinpoint and analyze places where students are struggling.

Participation Map

This feature allows teachers to visualize how and to what extent students exchange opinions and comments between themselves. Teachers can easily identify who speaks up often and those who don't.

File Sharing Feature

Teachers can use this platform as a file-sharing server since teachers can share and distribute various types of files including video, teaching materials, texts, and references. This feature makes classroom settings more efficient by letting teachers distribute and collect each student's files with ease.

Video Chat

Schooltakt supports up to six lines for remote learning on live video calls. By putting this feature alongside the views of all the students' answers, it's as if there are actually desks in front of the teacher.

WANTED!

We are recruiting **Ruby on Rails engineers** and also seeking **international business partners.**
